

■ eCommerce Single-Store Platform Plan

1. Client App (Customers)

- 1 Product browsing (categories, search, filters)
- 2 Cart & Wishlist
- 3 Place orders (COD / online payment)
- 4 Order tracking (Placed → Packed → Out for Delivery → Delivered)
- 5 Profile (addresses, order history, settings)
- 6 Notifications for order updates

2. Admin App / Web (Store Owner)

- 1 Add / Update / Delete products
- 2 Manage categories & product details (price, stock, images)
- 3 Manage orders (view, update, cancel, assign delivery)
- 4 Stock control (low stock alerts, update availability)
- 5 Dashboard (sales, active orders, revenue)
- 6 Manage delivery boys (create accounts, assign orders)

3. Delivery Boy App

- 1 View assigned deliveries
- 2 Update status (Picked, Out for Delivery, Delivered)
- 3 See customer address + phone number
- 4 Google Maps integration for navigation
- 5 Mark COD as collected (if applicable)
- 6 Notifications when a new order is assigned

■ System Flow

- 1 Admin adds products → shown in Client App.
- 2 Customer browses & places order.
- 3 Admin gets notification → processes order → assigns delivery boy.
- 4 Delivery Boy delivers order & updates status.
- 5 Customer gets updates → sees 'Delivered' in app.

■■ Recommended Tech Stack (Simple + Scalable)

- 1 Frontend (Apps): React Native (cross-platform iOS + Android)
- 2 Admin Panel (Web): React + Tailwind (simple dashboard)
- 3 Backend: Node.js + Express OR Firebase (for faster development)
- 4 Database: MongoDB Atlas OR Firebase Firestore
- 5 Push Notifications: Firebase Cloud Messaging
- 6 Hosting:
- 7 • Web (Admin Panel): Vercel/Netlify
- 8 • Backend: Railway/Render/AWS
- 9 • Apps: Play Store + App Store
